Live your
best moment

THE LINE

Kisol Elegance Design brings a differentiated concept in two main aspects: versatility and technology.

This line brings the client to the realization of their project without any limitations. Any model you can imagine, we can create. Through a wide range of options in finishes, formats, measurements, and accessories, it offers endless possibilities to our customers who seek exclusivity and convenience, with its full ceramic coating and the option of finishing with glass inserts.

FORMATS, MEASUREMENTS, AND INSTALLATION

**Creativity and innovation
without borders.**

Without any pattern mold, Kisol Elegance Design allows the customer, architect, or engineer to build the ideal pool for their project. Total freedom to apply beaches, glass walls, infinity edges, waterfalls, stairs, LEDs, and hydromassage nozzles.

Once the project is designed, everything is delivered and installed at the client's home. Suppose the site does not allow the grounding of the structure. If that's the case, we can develop it with reinforcement for a self-supporting model.

MATERIALS AND RESISTANCE

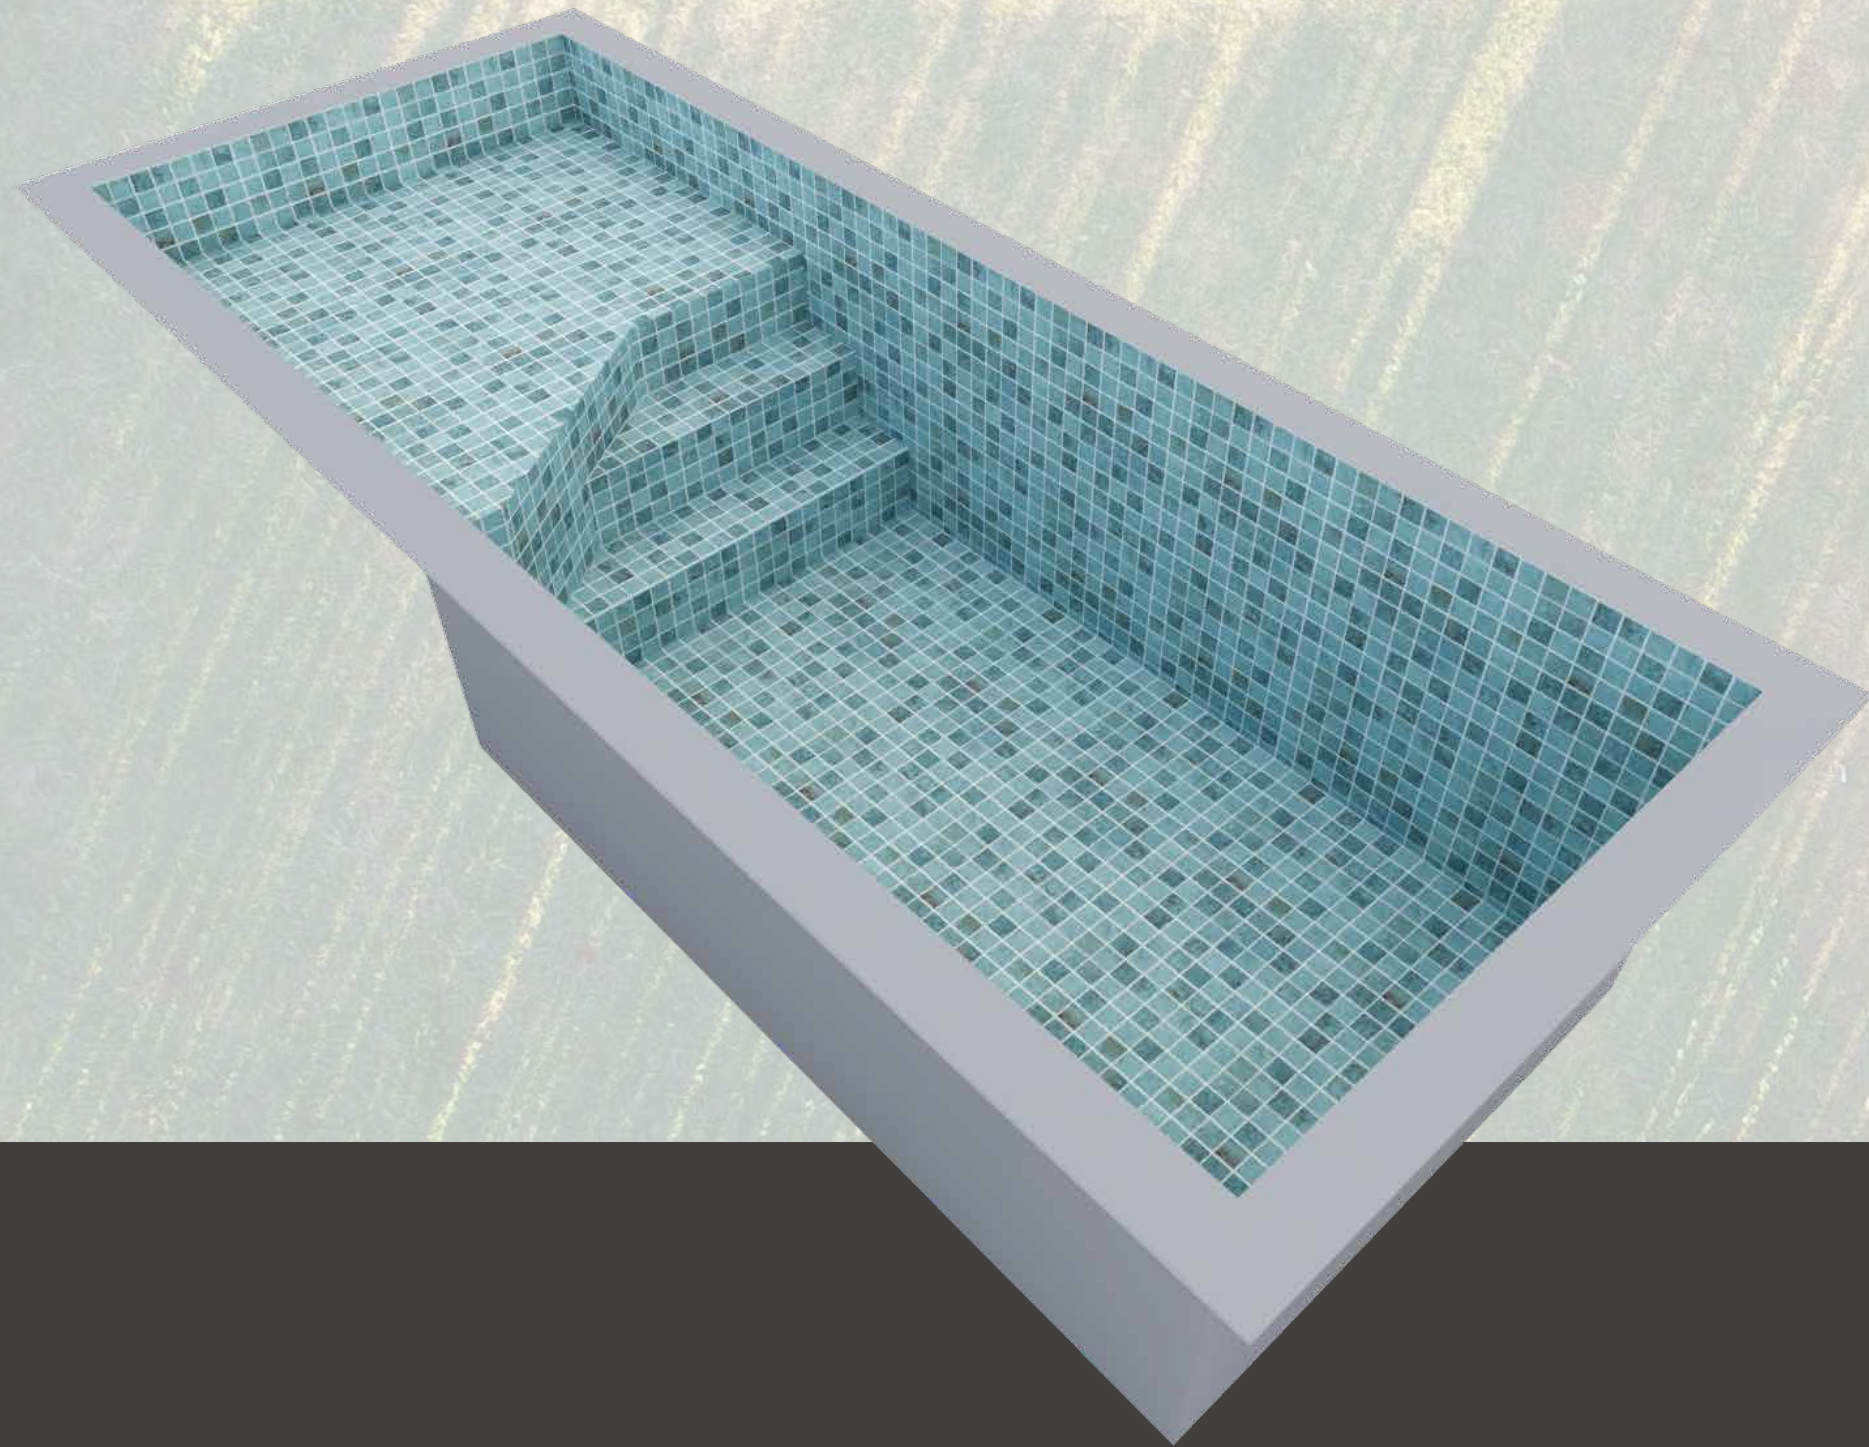

Illustrative images

The shells are built with polyester resin and fiberglass reinforced plastic (PRFV) with a 100% watertight guarantee and sophisticated coating in the best finishes.

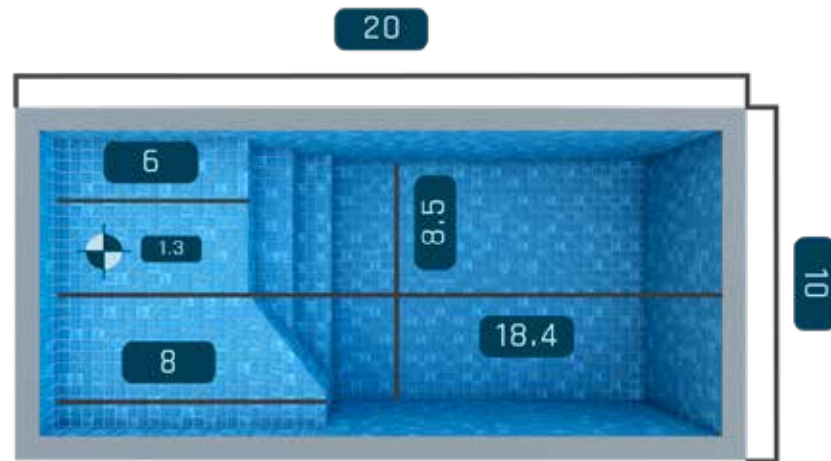

LATEST TRENDS

We work with the latest innovations to integrate your pool with the environment.

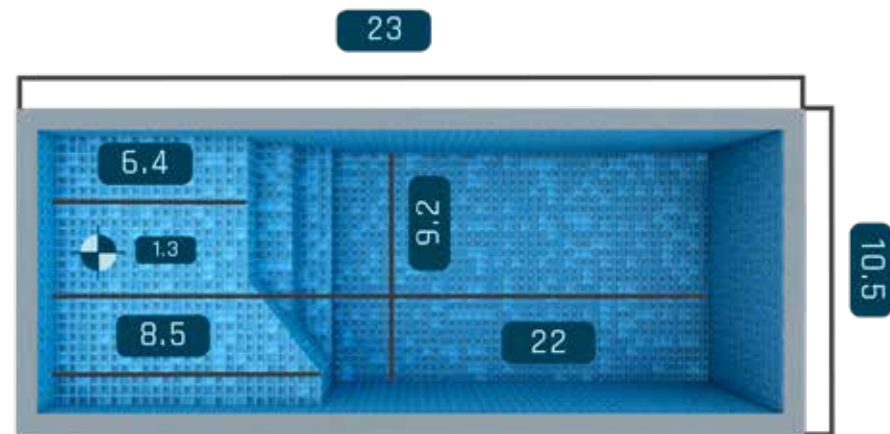

We have four trending design options: Beach Entry, Infinite Edge, Integrated SPA, and Transparency. All are great design choices for your Elegance Design.

INFINITY EDGE

Having gained tremendous popularity since the 1990s, mainly in luxury hotels and paradise resorts that have installed their infinity pools in such a way as to merge the sea, horizon, and paradisiacal landscapes, this is one of the most innovative and luxurious features that exist.

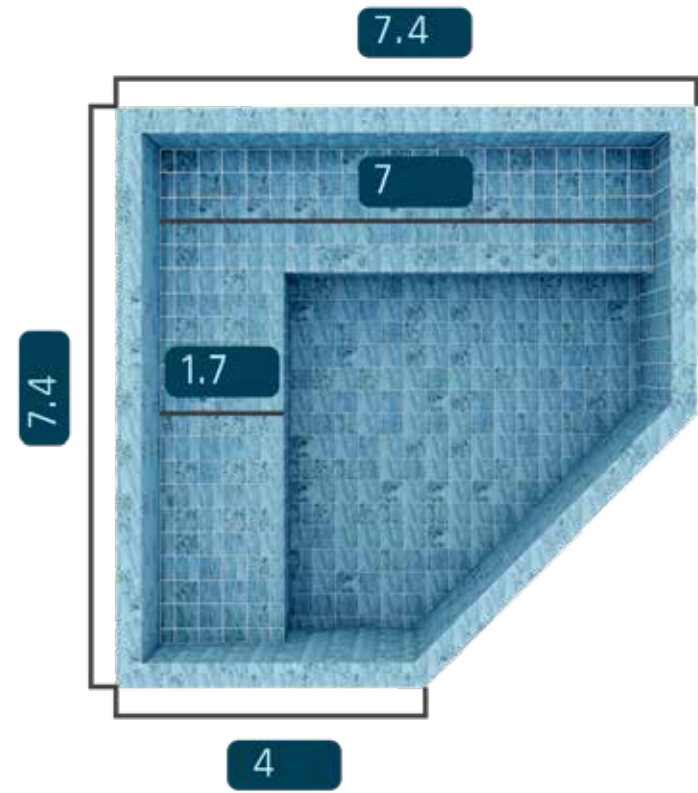

An infinity pool produces a visual effect or an optical illusion that the water extends to the horizon, disappears, or extends to infinity.

Most of the spectacular effect caused by an infinity pool is directly related to its location, view, and environment.

The “continuity” of the pool can be various things, from the horizon to the sea or the river. This type of pool works well in higher locations (in the case of the rooftop of a building or on land-facing slopes), which gives the infinity pool the effect of being suspended.

INTEGRATED SPA

This growing trend is to add different “attractions” to the pools, making them increasingly sought after, where everyone in the family can use them simultaneously.

One of the most requested items nowadays is the SPA, which used to be separated and is now integrated to create a cozy and relaxing environment.

Ask about the offered options of triangular or square SPAs.

TRANSPARENCY

The glass pool, with some transparent faces, is increasingly desired due to its light exposure and sophisticated appearance.

The glass lets you view the water with transparency when exposed to an external area. The result is the appreciation of the environment through the lightness of the glass and the pleasant and attractive appearance of the water, especially with lighting inside the pool.

VERSATILE FINISHES

Elegance and Sophistication

The coating is one of the elements that define the “personality” of your pool. It is highly versatile, enabling integration with various types of environments. Elegance Design values exclusivity and offers options in porcelain tiles, ceramic coatings, natural stones, and different edges.
